Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Hired farmworkers form a core component of the agricultural workforce in the United States, numbering an estimated 1.8 million workers. Very little national health data exists on this population because of difficulties in identifying and enumerating them. In 1998, to define the magnitude and scope of hired farmworker occupational health problems, the National Institute for Occupational Safety and Health (NIOSH) collaborated with the Department of Labor to collect occupational safety and health information about a nationally representative sample of hired farmworkers. The collaboration allowed NIOSH to include questions on occupational health in an existing Department of Labor survey, the National Agricultural Workers Survey. The purpose of the original survey continues to be the collection of demographic and employment data on hired crop farmworkers. This document presents a first look at the health data from this collaboration. This document presents nationally representative data on hired crop farmworker occupational health. Data presented in this document are based on face-to-face interviews with 3,613 hired farmworkers completed between October 1, 1998 and September 30, 1999. Topics covered include
