

Electrospun Micro and Nanofibrous Membrane for Tissue Engineering

By Naznin Sultana

LAP Lambert Academic Publishing Jul 2015, 2015.

Taschenbuch. Book Condition: Neu. 220x150x6 mm. This item is printed on demand - Print on Demand Neuware - Recently, in the field of tissue engineering, fabrication of three dimensional (3D) electrospun membrane is much emphasized. 3D scaffold fabricated from multi-layered electrospun membrane possess both the benefits of nanofibrous and microfibrous scale morphology in one scaffold. In this book, layered composite scaffolds or membranes were fabricated using blend of Polycaprolactone (PCL) /Chitosan and PCL layer-by-layer using multilayer electrospinning technique. Characterization of membranes were conducted using several techniques. Using optimized solution concentration and processing parameters, the composite PCL/Chitosan and PCL layer-by-layer membrane were successfully fabricated. From the scanning electron micrographs, it was observed that the composite electrospun membranes produced microfibers and nanofibers morphology within single scaffold. In another part of this book, PCL was blended with Chitosan using a common solvent formic acid and acetic acid. The ratio of concentration of the polymers was varied in order to form different level of viscosity of polymeric solutions. Then the PCL/Chitosan nanofibers were fabricated via electrospinning technique. 92 pp. Englisch.

Reviews

This book will never be straightforward to start on reading through but quite enjoyable to learn. Better than never, though i am quite late in start reading this one. Your lifestyle span will probably be convert once you complete reading this publication.

-- **Dr. Kadin Hane DVM**

This publication may be worth purchasing. it was actually writtern quite flawlessly and valuable. I am just happy to tell you that this is actually the very best book i actually have study inside my personal life and can be he best ebook for actually.
